# SIBOL — Complete Case Lifecycle, Teen Disclosure Authorization & Privacy Framework

Comprehensive companion to the integrated Teenager ↔ Barangay ↔ MOPH lifecycle infographic

REVISION 2 | Intended future workflow and gap analysis | Supersedes the earlier companion document

Status: Design proposal and educational privacy analysis. The enhanced consent gate and identifiable referral have NOT been established as implemented. This document does not authorize deployment or assert legal compliance.

## Executive decision and essential distinction

The Product Owner's intended design deliberately CHANGES the existing initial referral: the original Barangay→MOPH referral omitted the teenager's identity; the proposed referral may include specifically authorized identifying information after the Barangay requests and records the teenager's disclosure decision, subject to applicable Philippine law and rules governing minors. The initial referral and MOPH acknowledgment still occur BEFORE formal case opening in the target infographic. Continuing case management follows without replacing or duplicating that initial exchange.

Opening a case is NOT consent to disclose identity. A request acknowledgment is NOT consent. Registration privacy consent is NOT automatically referral-specific authorization. No identifiable information may be sent merely because a referral button is pressed.

## 1 | One integrated end-to-end workflow

| Step / phase | Sender → receiver | Action and expected record |
|---|---|---|
| **1 • Initial** | Teen → Barangay | Teen submits assistance request; Barangay records request. |
| **2 • Initial** | Barangay → Teen | Barangay acknowledges receipt and next steps; acknowledgment recorded. |
| **3a • Privacy gate** | Barangay → Teen | Barangay asks whether specific identifying data may be shared with MOPH; displays recipient, purpose, data categories, consequences of refusal, rights and contact details. |
| **3b • Privacy gate** | Teen → Barangay | Teen grants or declines informed, specific authorization where legally valid; determine guardian/representative or other lawful basis where applicable; record decision and authority. |
| **3c • Privacy gate** | SIBOL server | Before any identifiable transmission, validate scope, recipient, status, legal authority, minimum necessary fields and applicable restrictions; otherwise block identifying disclosure. |
| **4 • Initial referral** | Barangay → MOPH | Send initial referral. Identifiable version only when valid authorization/lawful basis exists; otherwise only a legally |

| | | |
|---|---|---|
| | | permissible nonidentifying pathway, if designed and approved. |
| **5 • Initial acknowledgment** | MOPH → Barangay | MOPH acknowledges receipt of initial referral; distinct return communication and audit event. |
| **6 • Case opening** | Barangay (internal) | Open one formal case linked to original assistance request and initial referral/acknowledgment; avoid duplicate case/referral. |
| **7 • Case continuation** | Barangay (internal) | Set Open/In Progress; manage authorized follow-ups and existing offline capture. |
| **8 • Coordination** | MOPH → Barangay | MOPH requests additional information, if necessary. |
| **9 • Coordination** | Barangay → MOPH | Barangay checks scope/authority and responds with only permitted information. |
| **10 • Coordination** | MOPH → Barangay | MOPH sends updated coordination status and next steps. Arrow MUST point toward Barangay. |
| **11 • Teen update** | Barangay → Teen | Where supported and authorized, provide appropriate progress or next-step information; teen-facing status delivery is not yet verified. |
| **12 • Outcome** | MOPH → Barangay | MOPH reports coordination completed or unable to accommodate, with reason where appropriate. |
| **13 • Outcome update** | Barangay → Teen | Where supported, communicate appropriate outcome and follow-up arrangements. |
| **14 • Resolution** | Barangay (internal) | Confirm required coordination and follow-ups; mark case Resolved. |
| **15 • Closure** | Barangay (internal) | Close case; preserve authorized audit and case history under retention rules. |

Sequence note: This is the APPROVED INTENDED DIAGRAM sequence, not a verified description of the current software's technical transaction order. Existing enhanced code has a case-opening action followed by case-linked referral creation; engineering must reconcile legacy referrals created before formal case opening without data loss, duplicates, or altered production behavior.

## 2 | How the teenager is asked for permission

### Consent conversation, not a silent checkbox

- After acknowledging the assistance request, the Barangay initiates a disclosure request through SIBOL; the teenager receives a clear, accessible explanation before MOPH receives identifying data.
- The notice identifies MOPH, explains the specific hospital coordination purpose, lists proposed data fields (e.g., name, age/date of birth if necessary, contact, relevant referral details), and states who may access them.

- The teen is offered affirmative authorization or refusal, without preselection, coercion, or treating silence as permission. Any needed parent/guardian/legal-representative role must be assessed for the particular minor and service.
- SIBOL records notice version, decision, time, recipient hospital, approved fields/purpose, identity and authority of person giving consent, and withdrawal or expiry status.
- A Barangay user can see whether authorization is pending, approved, declined, withdrawn, or subject to a separately approved lawful-basis exception. No staff member can override the server disclosure gate through a client-side edit.

### Illustrative notice (subject to legal and usability review)

"To coordinate assistance with Misamis Oriental Provincial Hospital (MOPH), Barangay 3 (Poblacion) proposes sharing the following information: [specific fields]. MOPH will use it for [specific coordination purpose]. You may ask questions and choose whether to authorize this disclosure. If you decline, the Barangay can continue assistance it is legally able to provide, but certain hospital coordination may not be possible. [Privacy contact and rights information]."

Authorization choices: "I authorize sharing the listed information with MOPH for the stated purpose" / "I do not authorize this sharing." This is illustrative wording only; no representation that it is presently implemented or legally sufficient for all minors.

## 3 | Decision branches and limits

| Situation | Required behavior |
|---|---|
| **Authorized and legally valid** | Transmit only the approved necessary fields to the specified hospital; log the disclosure. |
| **Declined, pending or withdrawn** | Do not send identifying data under a consent-based pathway; continue permissible Barangay assistance. Handle withdrawal prospectively and assess existing lawful retention/disclosures. |
| **Minor lacks legal capacity for this decision** | Use legally required parent/guardian/representative authorization or another demonstrably applicable legal basis; do not assume teen assent alone is always sufficient. |
| **New hospital, purpose, or materially broader data** | Reassess legal basis; obtain fresh specific authorization where required. |
| **Emergency or another legal exception** | Use separately approved restricted exception process; document necessity, authority, minimum disclosure, and review. Do not mislabel exception as teen consent. |
| **Initial nonidentifying referral** | May proceed only if data are genuinely nonidentifying in context and there is an appropriate lawful/approved workflow; pseudonyms or combinations of facts can still identify a teen. |

## 4 | Philippine privacy rights and legal framework

RA 10173 (Data Privacy Act of 2012) and its Implementing Rules and Regulations require transparency, legitimate purpose, proportionality, and suitable security measures. Adolescent pregnancy and health-related information is sensitive personal information. Sections 12 and 13 distinguish lawful grounds for personal and sensitive-personal-information processing; consent is important but not the only possible lawful ground. A project-specific legal determination is required before relying on an exception. [1][2]

NPC Circular No. 2023-04 provides guidance on valid consent: consent must be freely given, specific, informed, and indicated through an appropriate affirmative act, with evidence retained. For SIBOL, referral-specific authorization must not be buried inside general registration terms. [3]

RA 10354 (Responsible Parenthood and Reproductive Health Act) contains provisions relevant to minors and reproductive-health services. Consent to disclose data and consent to clinical examination or treatment are distinct questions; legal capacity and parental/guardian requirements cannot be reduced to one universal age rule. Qualified Philippine legal/privacy and healthcare review is necessary. [4]

### Rights and operational responsibilities

- Provide clear notice of purpose, recipients, categories of information and privacy contact.
- Provide procedures for access and correction, and handle objection, withdrawal and other statutory rights as applicable.
- Use role-based least privilege: Barangay accesses its authorized cases; MOPH accesses only its assigned referrals; Central Admin access must be limited and audited.
- Encrypt communications, protect storage, avoid personal data in logs and notifications, and audit disclosure and access events.
- Define retention, deletion/archiving, breach response, inter-agency responsibilities, and any necessary data-sharing arrangement.
- Never claim that a design diagram alone proves RA 10173 compliance. Compliance also depends on lawfulness, actual technical controls, governance, training and operational practice.

## 5 | Technical acceptance requirements for SIBOL

| Control | Minimum acceptance evidence |
|---|---|
| **Teen ↔ Barangay authorization UI** | Observed notice delivery, explicit grant/refusal, accessible explanation, and correct pending states. |
| **Authority determination** | Documented minor-specific decision tree and guardian/representative workflow where applicable. |
| **Server disclosure gate** | Negative tests prove no identifying payload is transmitted without valid legal basis; client bypass attempts denied. |
| **Referral fields** | Field-level minimization, recipient binding and tests for scope changes. |
| **Initial MOPH acknowledgment** | Distinct MOPH→Barangay receipt event visible in UI and persisted. |
| **Legacy/referral linkage** | Initial referral, acknowledgment and later case linked once without duplicate records. |
| **Continuing coordination** | MOPH request → Barangay response → MOPH status update → Barangay, all audited. |
| **Case lifecycle** | Open → In Progress → Resolved → Closed, with authorized state changes and preserved history. |
| **Offline regression** | No duplicate follow-ups; pending local data safely synchronizes; no unauthorized offline disclosure. |
| **Privacy governance** | Approved notices, lawful basis, records of processing, retention, access rights, security and operational ownership. |

## 6 | Implementation status and demonstration boundaries

| Capability | Status as of this revision |
|---|---|

| | |
|---|---|
| **Original teen request, Barangay acknowledgment and nonidentifying initial MOPH referral** | Existing workflow; preserve. |
| **MOPH referral receipt/acknowledgment** | Existing coordination capability; exact UI and persistence behavior should be verified. |
| **Case lifecycle and Barangay–MOPH information request/response** | Implemented in enhanced code; seven focused integration tests passed; full Flutter UI acceptance pending. |
| **Consent request/decision and server-enforced identifiable referral** | NEW PROPOSED REQUIREMENT; NOT verified as implemented. |
| **Teen-facing progress/outcome messages** | Not established as implemented; do not claim verified. |
| **Legal compliance with Philippine privacy law** | NOT certified; local legal/privacy review required. |

The November 3 student demonstration phones and production Firebase project sibol-286d0 remain untouched. No production deployment, data export, rules change or device installation is authorized by this document.

## 7 | Recommended defense explanation

“SIBOL already allows teenagers to request help and Barangay personnel to acknowledge requests and refer cases to MOPH without initially revealing the teenager’s identity. The proposed next stage asks the teenager for specific authorization before sharing identifying details with MOPH, subject to the legal safeguards applicable to minors. MOPH acknowledges the referral back to the Barangay. A linked case can then be managed through hospital information requests, Barangay responses, progress updates, resolution and closure. The enhanced case workflow is under acceptance testing, and the consent-controlled identifiable referral is a proposed privacy-by-design enhancement, not yet deployed.”

## 8 | Open approvals before implementation or release

- Confirm legal basis and authority rules for minors, including guardian involvement and sensitive-health-data exceptions.
- Approve exact notice, authorized fields, hospital recipient and withdrawal handling.
- Resolve case/referral ordering in the existing code while preserving initial referral and acknowledgment.
- Implement and test teen–Barangay authorization exchange and server enforcement; test negative paths.
- Complete emulator-only functional acceptance and privacy/security review; do not touch production or demo phones without separate authorization.
